A MODERN INVENTORY & PURCHASING PLATFORM FOR SHOPIFY

THE VISION

Stock Buddy was built to solve the "Manual Limbo" between Shopify and physical operations. While Shopify is your storefront, Stock Buddy is your operational partner—managing the entire lifecycle of your inventory before it ever hits your shelves.

CORE CAPABILITIES

📑 THE RECONCILIATION ENGINE

- Persistent "Expected" Data: Unlike Shopify, Stock Buddy never "forgets" your original order math. We preserve the gap between what you ordered and what actually arrived.
- Short-Shipment Flags: If a vendor sends 80 units of 100, those 20 missing units stay flagged as "Owed" rather than vanishing into a closed status.
- Automated Transmission: Instantly email POs (CSV/PDF) to suppliers, ensuring your digital trail matches their warehouse paperwork.

📊 INTELLIGENT INVENTORY MANAGEMENT

- Eliminate "Ghost Inventory": Track real-time units ordered vs. received across all open POs. You'll always know exactly what is sitting in a warehouse versus what is truly on the way.
- Location-Level Detail: See exactly which synced Shopify location is expecting the stock, preventing "mis-received" inventory headaches.

🏢 SUPPLIER & PRODUCT FOUNDATIONS

- Direct Supplier Management: Unlike "Vendors" in Shopify, "Suppliers" are managed directly in Stock Buddy with specific lead days, payment terms, and contact info.
- Supplier-Specific Data: Bulk-import or manually enter supplier SKUs, costs, case packs, and MOQs for every variant.
- Multi-Vendor Support: A single supplier can be linked to variants from multiple Shopify vendors.

🖥️ OPERATIONAL CONTROL & VISIBILITY

- Actionable Dashboard: Quickly identify low-stock variants, overdue purchase orders, and total incoming units.
- Global Settings: Standardize your operations with customizable PO numbering formats, default expected date offsets, and branded PDF/email templates.

🔗 HOW IT WORKS WITH SHOPIFY

Operational Staging Area: Stock Buddy acts as your "source of truth" for receiving. We pull your products and variants from Shopify, but we only push inventory updates back to your storefront when you hit "**Confirm Receipt**." This protects your live store from receiving errors and "Manual Limbo" data.

🚀 THE ROADMAP: WHAT'S COMING NEXT

Stock Buddy is evolving quickly. While version 1.0 focuses on stabilizing your core purchasing and inventory workflows, we are already developing:

- **Low-Stock Intelligence:** Automated alerts and "Recommended Reorder" logic based on your historical velocity.
- **Supplier Portal:** A streamlined interface for your suppliers to acknowledge POs and update shipping status directly.
- **Advanced Reporting:** Deep-dive analytics into supplier lead times, fill rates, and landed cost accuracy.
- **Enhanced Integrations:** Expanding beyond Shopify to support 3PL systems and other specialized e-commerce tools.

💡 JOIN THE PRIVATE BETA

I am personally reviewing all feedback to ensure our reconciliation logic handles every "Manual Limbo" scenario. As a 21-year logistics veteran, I'm building this to be a professional-grade solution for the Shopify community.

Ready to close the Gap? DM me directly or email hello@brandongillon.com to get a direct link to the private beta environment. No calls or demos required—just log in, connect your test store, and tell me where the friction is.
