A MODERN INVENTORY & PURCHASING PLATFORM FOR SHOPIFY

THE VISION

Stock Buddy was built to solve the "Manual Limbo" between Shopify and physical operations. While Shopify is your storefront, Stock Buddy is your operational partner—managing the entire lifecycle of your inventory before it ever hits your shelves.

CORE CAPABILITIES

📑 END-TO-END PURCHASING WORKFLOW

- Complete PO Lifecycle: Create, edit, and manage POs from draft status through to completion.
- Automated Transmission: Automatically email POs (as CSV, PDF, or both) to suppliers the moment they are released.
- Precision Tracking: Monitor PO statuses including Draft, Released, Partially Received, and Closed.
- History Logs: Access a timestamped audit trail of all actions, including edits, releases, and cancellations.

📊 INTELLIGENT INVENTORY MANAGEMENT

- Consolidated Overview: View total available quantities across all synced Shopify locations in one table.
- Incoming Inventory Tracking: Real-time calculations of units ordered, received, and remaining, aggregated across all open POs.
- Location-Level Detail: Expand any product row to see exactly where units are stored or expected.

🏢 SUPPLIER & PRODUCT FOUNDATIONS

- Direct Supplier Management: Unlike "Vendors" in Shopify, "Suppliers" are managed directly in Stock Buddy with specific lead days, payment terms, and contact info.
- Supplier-Specific Data: Bulk-import or manually enter supplier SKUs, costs, case packs, and MOQs for every variant.
- Multi-Vendor Support: A single supplier can be linked to variants from multiple Shopify vendors.

🖥️ OPERATIONAL CONTROL & VISIBILITY

- Actionable Dashboard: Quickly identify low-stock variants, overdue purchase orders, and total incoming units.
- Global Settings: Standardize your operations with customizable PO numbering formats, default expected date offsets, and branded PDF/email templates.

🔗 HOW IT WORKS WITH SHOPIFY

- Two-Way Harmony: Stock Buddy pulls products, variants, and locations from Shopify.
- Inventory Sync: On-hand levels are synced from Shopify, while Stock Buddy updates Shopify's available inventory as items are received on a PO.

🚀 THE ROADMAP: WHAT'S COMING NEXT

Stock Buddy is evolving quickly. While version 1.0 focuses on stabilizing your core purchasing and inventory workflows, we are already developing:

- **Low-Stock Intelligence:** Automated alerts and "Recommended Reorder" logic based on your historical velocity.
- **Supplier Portal:** A streamlined interface for your suppliers to acknowledge POs and update shipping status directly.
- **Advanced Reporting:** Deep-dive analytics into supplier lead times, fill rates, and landed cost accuracy.
- **Enhanced Integrations:** Expanding beyond Shopify to support 3PL systems and other specialized e-commerce tools.

💡 JOIN THE PRIVATE BETA

We are looking for a small group of Shopify merchants to help us refine the platform. As a beta tester, you will have direct access to the roadmap and the opportunity to shape the features that solve your specific logistics headaches. If you have any questions or are interested in joining the beta, I'd love to chat.

- Email: hello@brandongillon.com
- LinkedIn: Comment: Simply reply to my post with "Buddy" and I'll reach out directly.
- You can also sign up directly at https://stock-buddy.brandongillon.com/request-access
